

BAKERS TANKERS · INTERNAL · UPDATED 16 SEPTEMBER 2026 · MEETING TOMORROW, 17TH

Bakers Playbook

For Bronwan Fouche. Do not walk in with a saving. The motor insurer excludes hazardous materials and the client hauls jet fuel. The EnviroSure clean-up quote is real now, at R15,890/mo, and it has already lapsed. Get it reconfirmed before tomorrow.

QUOTE LAPSED

EnviroSure

valid until 14 Sept, get it reissued

REAL SAVING

R29,454

a year, goods in transit, before clean-up cost

Their motor policy excludes hazardous materials. They haul jet fuel.

OUTSURANCE OT89649119, FLEET SPECIAL CONDITIONS

"OUTsurance does not provide cover in the following instances: ... *** when the vehicle transports hazardous materials**"

Business description on the same schedule: **"Service & repair, Transport, goods"**. Nothing about tankers, fuel or dangerous goods.

AND THE GOODS IN TRANSIT SUBMISSION, 14 SEPTEMBER

"General Goods, **Diesel, Petrol, Illuminated Paraffin, Jet Fuel**, FMCG, Scrap Metal and Scrap Batteries."

Two documents, same client, same broker file, six weeks apart. One says the vehicles carry fuel. The other says vehicles carrying hazardous materials are not covered.

WHY IT IS NOT JUST SLOPPY DRAFTING

The same OUTsurance schedule sells **environmental impairment liability R5,000,000 per vehicle at R91.09** and records **"Type of substance: Liquid. Containers used: Yes."** The insurer has underwritten and priced a liquid pollution exposure on vehicles its own fleet conditions exclude. You are not speculating, you are pointing at an internal contradiction on one document.

SAY IT LIKE THIS, AND NO STRONGER

"Before we talk about price I want to put one thing in front of you, because I would rather raise it and be wrong than stay quiet and be right. Your fleet schedule says OUTsurance does not cover a vehicle transporting hazardous materials. Your goods in transit submission says you carry diesel, petrol, paraffin and jet fuel. I have gone back to OUTsurance in writing. I am not asking you to do anything today, I am asking you not to decide anything until we have their answer."

PRECEDENT, FOR YOU

Twin Trans. King Price came in cheaper on a fuel tanker and had dropped pollution liability and halved third party. We benched it. On a tanker fleet the decisive cover is never the headline premium, it is what pays when the load ends up on the road.

OUTsurance covers 30 vehicles. Alpha now quotes 214, up from 183.

Alpha reissued as V4 on 16 Sept, same day as the Envirosure quote. Identical wording throughout, the fleet grew by 31 vehicles and the price by R53,834.58/mo. R191,938.68 against R75,457.10 looks like Alpha is 154% more expensive. It is not a comparison at all, both documents reconcile, they just describe fleets that are further apart than they were three days ago.

ALPHA V4, BY CLASS	UNITS	V2 UNITS	SUM INSURED	PREMIUM
Heavy commercial	55	29	R50,491,543	R92,567.83
Trailers over 3,500kg	124	119	R28,444,295	R23,694.10
Private type	19	19	R5,240,025	R7,698.47
Light commercial	16	16	R1,964,061	R3,392.59
183				

Summary: general R190.00 + motor R127,352.98 + liability R11,000.00 + extensions R2,750.00 + VAPS R1,605.00 + Sasria R31,511.54 + towing R17,529.16 = R191,938.68. Reconciles. Private and light commercial are unchanged to the vehicle, all the growth is 26 more heavy trucks and 5 more trailers.

THE HONEST LIKE-FOR-LIKE, AND IT NOW FAVOURS ALPHA BY A LOT

OUTsurance: 26 trucks, R62,854.24, so R2,417.47 each.

Alpha V4: 55 trucks, R92,567.83, so R1,682.14 each.

Alpha is R735.33 per truck cheaper, about 30%.

That is a big move from V2's R197.05 (8.2%). Average sum insured per truck actually went UP, R832,659 to R918,028, so it is not simply cheaper because the trucks are worth less. **Get this rate confirmed in writing by Sandile Ndlovu before you treat it as firm**, a jump this size in one reissue deserves a question, not a straight sell.

THE QUESTION YOU HAVE TO ASK BEFORE TOMORROW, AND IT GOT BIGGER NOT SMALLER

What insures the other 184 vehicles? Extra heavy trucks alone is now 29 (55 vs OUTsurance's 26), not 3 as it was on V2. Plus 120 extra trailers, 19 private, 16 light commercial. Either a second motor policy exists that nobody has sent us, or a large part of this fleet is uninsured. **Do not present any motor comparison until you know.** If it is uninsured, that is a bigger conversation than the premium, and it is the conversation that wins the account.

EXCESS, WHICH CUTS THE OTHER WAY

OUTsurance: flat R50,000 basic on the heavy units, third party R6,980, glass R2,000, accessories nil. **Alpha: 10% of claim minimum R30,000** on heavy commercial and trailers over 3,500kg, 5% minimum R5,000 on light and private. Alpha's minimum is lower, but it is a percentage: **on a R1.5m truck, 10% is R150,000 against OUTsurance's flat R50,000.** On any serious loss OUTsurance is materially better. Say so.

Alpha's clean-up cover is one fifth, and it is on the wrong section

	THIRD PARTY	POLLUTION AND CLEAN-UP
OUTSURANCE	SUB-SECTION B R5,000,000	EIL R5,000,000 PER VEHICLE, R91.09/MO, CLAIMS-MADE, RETRO 30 JUN 2026
Alpha	Sub-section B R5,000,000	Clean-up costs (leakage from vehicle) R1,000,000, 0.240% = R5,800.00

THE PART NOBODY WOULD NOTICE OFF A SUMMARY

Alpha's clean-up line appears **only in the HEAVY COMMERCIAL liability table**. The liability tables for **trailers over 3,500kg**, light commercials and private types each show sub-section B at R5,000,000 and **no clean-up line at all**.

On a tanker fleet the product is in the trailer. A spill from a tanker trailer may sit outside an extension written against the truck. This is the same method point as the Wes-Kaap and Gateway passenger liability finds: **read it per item, not per summary**.

AND A DISCLOSURE THAT CUTS AGAINST THE INCUMBENT TOO

OUTsurance's EIL is **claims-made with a retroactive date of 30 June 2026**, about six weeks of tail. Anything before that is uninsured for pollution on either document. Mention it; it is the kind of thing that builds trust and it costs you nothing because the alternative is worse.

THE REAL QUOTE LANDED 16 SEPT, AND IT IS A DIFFERENT PRODUCT FROM THE ONE WE CHASED

Envirosure Spill Protect Plan, Transport (not "The Transport Clean-Up", the blank form turned out to be the wrong product), underwritten by Centriq FSP 3417, ref '20260814/FP/01', prepared by Adelle Hartley. **R15,890.00/mo = R190,680/yr**: environmental impairment premium R14,850 + Hazcall24 fee R500 + VAPS R540, broker fee R0.00.

Transportation of dangerous goods **R5,000,000** · third party liability solution **R5,000,000** · riot and strike R2,500,000/R1,000,000 · transfer assist R250,000/R50,000 · side tank R150,000. **Excess nil within and outside RSA, EXCEPT a flat R10,000 on every third party liability claim** ("Excess Solutions cover will not apply to Third Party Liability Solution claims"). Claims-made, retro = inception, so no tail to lose. Covers **27 specified vehicles**.

📅 IT HAS ALREADY EXPIRED

Quote valid until 14 September. Today is 16 September. Meeting is tomorrow. Get it reconfirmed or reissued before you walk into that room. Do not present a lapsed number.

Broker on the quote is printed as "Vaps", not Cartrack. Attention Nadia Pelser. Confirm Cartrack's code is on the reissue or the R1,923.75/mo commission goes elsewhere.

27 VEHICLES IS A CLUE, NOT A COINCIDENCE, AND IT CUTS AGAINST ALPHA'S NEW COUNT

Envirosure specifies 27 vehicles. OUTsurance's own depot record caps at **"Max number of vehicles 27"**, against 30 scheduled. Alpha's V2 quoted 183, V4 now quotes 214. **Working theory: 27 is the real active tanker fleet doing hazardous work; the other counts are wider group totals across Bakers Tankers, Bakers Bulk and MG Carriers that include vehicles never carrying fuel.** Not confirmed, and Alpha's own number moving from 183 to 214 in three days without explanation makes it harder to trust either figure on its own. **Get Bronwan's new 108-page OUTsurance schedule (OT78078997) sent as an actual file, not just described in a WhatsApp screenshot, before tomorrow.** It may settle the "184 vehicles" question on page 03 outright.

REFRAME THE WHOLE PITCH AROUND THIS

Full programme = motor R75,457.10 + GIT R39,212.15 + spill cover R15,890.00 = **R130,559.25/mo**, against a current R117,123.77 with no clean-up cover at all. **+R13,435.48/mo, not a saving.** Say that first. The GIT saving is real but small next to what the client is actually buying: the first pollution cover this fleet has ever had. Sell the risk, not the rand.

Goods in transit saves R29,454 a year, subject to two fixes

	BASIS	MONTHLY
CURRENT SANTAM SPECIALIST MARINE AMDBLE265448M, DURBAN, BROKER STERLING HAMILTON WRIGHT 4349453	R50,000,000 AT 1.00% = R500,000/YR INCL VAT AND STRIKES AT 0.05%	R41,666.67
Nautical Underwriting Managers FSP 43437, JP Liebenberg, 20% commission	R50,000,000 at 0.90% = R450,000/yr + Sasria R1,712.15	
Saving		-R2,454.52/mo R29,454/yr

Any one conveyance R1,620,000 and driver fidelity R1,620,000 on both, to the rand. General excess 10% min R10,000 and hijack 25% min R25,000 on both. Debris removal R25,000 goes to R30,000. **Territory goes from four to twelve.**

FIX 1: IT NAMES ONE ENTITY INSTEAD OF THREE

Santam insures "**Bakers Tankers, Bakers Bulk & MG Carriers FTTR&I**". The new quote names **Bakers Tankers** alone. Moving as quoted leaves two entities without goods in transit cover. **Same shape as the seven named insureds on Integral Trading.** Get all three on the schedule before anything is bound.

FIX 2: AN ADDITIONAL EXCESS THAT BITES ON THE SCRAP LOADS

On top of the normal deductibles, **High Risk Cargo over R1,000,000 attracts a further 25% of claim, minimum R25,000, unless armed escort.** Their own example: a R1,500,000 hijacked load carries **R525,000 of total excess.**

High Risk Cargo is defined to include "Precious Metals including Copper, Cobalt, Ferro Chrome etc." and "Solar Panels / Batteries / Inverters / Generators." The declared subject matter includes **Scrap Metal and Scrap Batteries.** Fuel is NOT on the list. So the clause bites on the scrap work and not on the tanker work. **Get that confirmed in writing.** R29,454 of annual saving against R375,000 of extra excess on one load is a bad trade if the scrap volume is material.

AND ASK THE CLIENT THE TERRITORY QUESTION

Twelve territories against four is a real gain **if they use it.** On Integral Trading the wide cargo territory turned out to be unused, diesel and RSA only, and was worth nothing. Ask before you sell it.

LOOSE ENDS ON THE GIT QUOTE

Period reads "**12 months commencing on TBA and ending on TBA**", postal address TBA, and loss history reads "**No previous claims in the last 3 years**" against a motor record showing eight incidents in 2022 alone. Different classes, but tell the underwriter or the price is not firm.

The OUTbonus, up to 179 units, and the admin

RAISE THE OUTBONUS YOURSELF, BEFORE THEY DO

The OUTsurance schedule projects a **Business OUTbonus of R307,010.54 payable 07 August 2028** on the current claims ratio, and confirms "the new Business OUTbonus is applicable on this Fleet policy". **Moving the motor forfeits it.**

This is the CS Continental lesson. There we found a R42,637.61 bonus worth 57 years of the saving and it stopped us moving the commercial policy. Here the bonus is seven times larger. It is claims-ratio dependent, and nothing is paid above 30%, so it is not guaranteed. **But you raise it, not them.** Being the broker who volunteers the argument against your own sale is what gets you the whole account.

UP TO 179-UNIT LEAD ON V4, AND IT IS A CONDITION OF COVER

The new GIT terms make theft cover on **any load over R500,000** conditional on **live satellite tracking, operational at the time of claim**, or a convoy of at least three vehicles. A full fuel load is comfortably over R500,000, so in practice that is every trip.

Alpha V4: 55 trucks plus 124 trailers = 179 units (V2 was 148). The trailers need their own units because the cargo and the theft exposure travel with the trailer. Confirm the real number once the OUTsurance schedule question is settled, do not quote units off a figure that has already moved once this week. OUTsurance's depot record lists security as **"Access control, 24 hours, Unspecified"** and **"Alarm with armed response, radio link, Unspecified"**, and says nothing about vehicle tracking at all.

43 dated fleet incidents over 10 years also makes the driver-scoring and camera case.

THE CLAIMS RECORD, AND THE GATE IT CREATES

43 incidents over 10 years, R1,588,000 disclosed across the 22 entries carrying a value. Worst single loss **R663,192 on 23 July 2022**. By year: 2017 one, 2018 seven, 2019 six, 2020 ten, 2021 eleven, 2022 eight. Mostly accidental damage.

Nothing on the Alpha quote says it was rated on that record. Get it in writing before R191,938.68 is treated as firm. Same gate as CS Continental and Idol Transport.

ADMIN TO CLEAR

Address is **15 Nereeniging Road, Alberton 1449** on Santam and **15 Vereeniging Road, Alberton 1451** on OUTsurance and the GIT quote. OUTsurance depot allows a **maximum of 27 vehicles against 30 scheduled**. **V4 fixed the Sasria gap we flagged on V2** (the four section figures now total R31,511.80 against a summary of R31,511.54, a 26 cent rounding difference, down from R6,236.60 out on V2), so that one is resolved and does not need chasing. OUTsurance broker of record is **Virgil Niekerk, an in-house OUTsurance broker**, the same arrangement as Lara Gray on CS Continental.
