

MARKET REVIEW · 21 SEPTEMBER 2026

Two Markets, Seventy Vehicles

Both quotations reconcile to the cent and both cover the same 70 vehicles. **One is R38,547 a month cheaper. It is also the one that has declined dangerous goods liability on all 45 trucks. Neither should be bound before three things are priced.**

NATSURE / COMPASS

● Natsure / Compass

● Alpha / Guardrisk

Your current insurer, schedule outstanding

Both documents reconciled to the cent

Natsure has quoted your account as **two policies**, a heavy commercial fleet policy and a commercial policy. Alpha has quoted it as **one**. Read together they cover the same **70 vehicles** and the same six premises, so they can be compared directly.

⚠ THE TWO NATSURE POLICIES DO NOT START TOGETHER

The fleet policy incepts **1 October** and the commercial policy **1 November**. As quoted that means a month in which half your programme has moved and half has not, or a month of paying twice. It is a correction, not a negotiation, and we have asked for the dates to be aligned.

ONE THING WE STILL NEED FROM YOU

We have not been given **your current policy schedule**. Until we have it we cannot tell you what either quotation saves you, only what they cost against each other. Please send it and we will complete that side within a day.

The cheaper quotation has declined dangerous goods liability on all 45 trucks

Both insurers describe your business in the same words: **"collection and transportation of waste, and general and hazardous waste management"**, serving health care practitioners and institutions. So the loss that defines this fleet is a spill.

△ FROM THE ALPHA SCHEDULE, ON EVERY ONE OF THE 45 TRUCKS

Clean up costs (Leakage from vehicle) · **No**

Spillage and clean-up costs: Substance transported · **No**

Liability arising out of the carriage of dangerous goods · **No**

Spillage and clean-up costs: Riot and strike · **No**

Tool of trade liability · **No**

Alpha prices every one of those as an available option on its own schedule. None of them has been taken.

POLLUTION AND CLEAN-UP	NATSURE	ALPHA
Clean-up costs on the 45 heavy vehicles	R250,000 each, R11,250,000 in total	none
Dangerous goods liability	not offered	offered and declined
On the trailers	none	none
On the buses and light vehicles	none	none
Cost of what Natsure does carry	R2,250.00 a month	not quoted

WHY THE TRAILERS MATTER MORE THAN THE TRUCKS

Alpha's schedule is the first document to tell us what your two trailers actually are: a **7.2m single skeletal drawbar trailer at R697,831**, and a **G.R.P 15,500mm tridem axle trailer at R2,689,098**. Glass reinforced plastic on a tridem axle is a liquid body. **That is the single unit on this fleet most likely to spill, and neither quotation carries one rand of clean-up cover against it.**

WHY R250,000 A VEHICLE IS THE WRONG ORDER OF MAGNITUDE

A spill of clinical or hazardous waste on a public road is not a cleaning bill. It brings in the municipality and the provincial department, it closes a road, and the remediation is charged to the operator. **Add third party property damage and the cost of the load itself and R250,000 is reached before the first invoice from the contractor.**

That is the limit on the dearer of the two quotations. The cheaper one carries nothing at all. **Neither insurer has been asked for a realistic figure, which is the actual finding here.**

△ AND THE SAME SUBJECT COMES BACK AS A WARRANTY ON THE PREMISES

The Natsure commercial policy makes cover at your sites conditional on, among others, **storage of hazardous and flammable substances in accordance with the OHS Act Regulation 4 and SANS 02363**, and on **waste being bagged daily and removed from the buildings at least once a week**. There is also a **SABS Class I lightning arrestor and Class II surge arrestor condition** and a **SAIDSA alarm linked to armed response** with the arming log available to the insurer.

On a hazardous waste site these are not paperwork. They are the conditions on which a claim is paid or declined, and they should be walked through before inception rather than after a loss.

✓ WHAT WE HAVE ASKED FOR

Alpha to price **dangerous goods liability**, **spillage and clean-up costs** on the trucks and the trailers, and **tool of trade liability**. Natsure to quote a clean-up limit above R250,000 a vehicle and to extend it beyond the trucks. **At R2,250 a month for R11,250,000, this is not expensive cover. It is simply cover nobody has asked for.**

Neither quotation contains public liability

We have three quotation documents in front of us, between R423,308 and R461,855 a month. **Not one of them carries a public liability section, a products liability section or an employers' liability section.** The only liability anywhere on either programme is motor third party, which responds to the use of a vehicle and to nothing else.

△ WHAT THAT LEAVES UNCOVERED

You supply **speci-bins, biohazardous tape and cable ties** into hospitals and clinics. You **handle biohazardous material on other people's premises**. You **run hazardous waste management training**.

A container that fails in a ward, a needlestick injury during a collection, contaminated waste that enters the wrong stream, or advice given in a training session: **none of those is a motor claim, and none of them is covered by anything on these documents.**

WHICH OF TWO THINGS THIS IS, AND ONLY YOU CAN TELL US

Either you hold a separate liability policy that we have not been shown, in which case the proposals as quoted would leave it behind and it must be replaced or kept alongside.

Or you do not hold one, in which case this is the most important thing on any page of this pack, and it is worth more than the R38,547 a month that separates the two quotations.

Your current schedule answers it. Nothing else will.

ALSO ABSENT FROM BOTH QUOTATIONS	NATSURE	ALPHA
Business interruption six premises, a processing plant at Denver	none	none
Machinery breakdown on R12,839,148 of plant and machinery	none	none
Fidelity	none	none
Goods in transit	none	none
Money, glass, deterioration of stock	none	none
Buildings	no sum insured	not included

△ AND ONE SECTION HAS BEEN UNDER-DECLARED

Sasria covers riot, strike, public disorder and terrorism, and it is a statutory rate on declared values, so the two documents should agree closely. They very nearly do, **and the difference shows where something has been left out.**

Natsure has declared R59,436,465 of vehicles to Sasria against a fleet of R61,174,651. The R1,738,186 difference is exactly your two buses. It has also declared the fifteen private cars as **"goods vehicles"**, at a figure R372,300 away from the motor sum insured on its own schedule. Both are corrections we have asked for.

THIRD PARTY LIABILITY, AND THE ONE REAL REGRESSION BETWEEN THE TWO

On the trucks and buses **Natsure carries R5,000,000 and Alpha carries R2,500,000.** Alpha is R2,500,000 across the whole fleet, behind a R5,000 excess where the cars carry nil.

In fairness to Alpha, Natsure's R5,000,000 is an **aggregate** that already contains the passenger liability and the fire and explosion limits inside it, so the true gap is narrower than it looks. **Neither figure is generous for a 45-truck fleet, and we have asked both to price R5,000,000 clean.**

They do not agree on what your vehicles are worth

Across the same 70 vehicles the two schedules are **R4,580,901** apart. Your buses and trailers match to the rand, so the documents share a source. The cars and the trucks do not.

VEHICLE	NATSURE	ALPHA	DIFFERENCE
JR29FVGP Mercedes-AMG G63	R2,761,100	R3,366,480	+R605,380
MY01SHGP BMW X5 xDrive30d Natsure says 2026, Alpha says 2023	R2,526,800	R1,878,600	-R648,200
BMW M135i, no registration Natsure says 2025, Alpha says 2024	R1,225,671	R860,271	-R365,400
KP73CVGP BMW X7 M50d	R1,585,400	R1,900,600	+R315,200
Whole fleet, 70 vehicles	R79,022,330	R74,441,429	-R4,580,901

△ WHY THIS CANNOT BE SETTLED BY PICKING THE HIGHER NUMBER

Two of the cars are described as different model years on the two documents. One of the lists is out of date. Under-insurance is settled by average, which means a partial loss is paid at the same proportion as the shortfall, so an under-declared vehicle is worse than an omitted one because it looks covered. **We need your asset register, not a choice between two guesses.**

✔ ONE THING ALPHA HAS GIVEN US THAT NATSURE HAS NOT

A vehicle-by-vehicle schedule of all 45 trucks. Almost the entire fleet is Isuzu, FTR 850 and FRR 600, with one Fuso and one **2025 Volvo FH 520 truck-tractor** at R2,617,300.

Nothing on the fleet is older than 2019. That matters, because Natsure's quotation is conditional on **inspection or valuation certificates for every vehicle ten years and older**. On this fleet that condition applies to **no vehicles at all**, which removes what could have been weeks of delay.

THE 45 HEAVY VEHICLES, BY YEAR	UNITS	SHARE	OLDEST
2024 and 2025 mostly Isuzu FTR 850 AMT	20	44%	
2022 and 2023	13	29%	
2020 and 2021	10	22%	
2019 one Isuzu FRR 600 and one Fuso FJ16-230S	2	4%	2019
Heavy fleet	45	R49,232,600	nothing pre-2019

🔗 TRACKING, AND IT IS A CONDITION OF COVER ON BOTH

63 of your 70 vehicles are recorded as requiring an approved tracking and recovery device, and on every one of them the fitment field reads "Unknown" or "No tracking device".

Both wordings make theft and hijack cover conditional on a working, paid-up device at the time of the loss. On the eleven cars valued over R350,000, Natsure's wording goes further: cover does not **incept** at all until a device is fitted. **As things stand a large part of this fleet would have no theft or hijack cover on day one, whichever insurer is chosen.**

What we recommend, and what has to happen first

OUR RECOMMENDATION

Alpha, on condition that it prices the three things it has left out. It is R38,547 a month cheaper, its excess structure is materially kinder on ordinary claims, and it is the only document that has given us a full vehicle schedule.

If Alpha will not price dangerous goods liability and clean-up, then Natsure, despite being dearer. On a hazardous waste fleet we will not recommend the cheaper programme when it is the one with no pollution cover at all.

EXCESS ON THE HEAVY VEHICLES		NATSURE	ALPHA
Basic excess	4.5% of the value of the vehicle, minimum R5,000		10% of the claim, minimum R5,000
Single vehicle incident		plus 5% of claim	no additional excess
Driving between 23h00 and 04h00 healthcare waste often moves before dawn		plus 5% of claim	no additional excess
Theft or hijack	20% of vehicle value, 10% with a device		15% of claim, minimum R3,000

READ THE BASIC EXCESS CAREFULLY, BECAUSE THE TWO WORK DIFFERENTLY

Natsure charges a percentage **of the vehicle**, so on an average truck that is roughly **R45,000 whatever the claim**, including a small one. Alpha charges a percentage **of the claim**.

The crossover is around R450,000. Below it Alpha is far better. Above it Natsure is. Most fleet claims are well below R450,000, which is why we read this as a point in Alpha's favour, but you should know it cuts both ways on a total loss.

BEFORE EITHER IS BOUND

- 1 Your current policy schedule , so we can tell you what either of these actually saves.
- 2 Confirmation of whether you hold public liability , and where.
- 3 Alpha to price dangerous goods liability and clean-up , on the trucks and the trailers.
- 4 Third party liability at R5,000,000 , priced by both.
- 5 Your vehicle asset register , to settle the R4,580,901 and the two disputed model years.
- 6 Tracking fitted before inception, or theft cover will not attach on a large part of the fleet.

SMALLER THINGS WE WILL CLEAN UP

Your **company registration number and VAT number are blank on all three documents**, which means none of them can serve as a tax invoice. Alpha's schedule says **"included entities: refer to page 2"** and page 2 is the cover summary, so no entity list exists in 190 pages. Declared turnover, wages and employee numbers are blank. **Natsure has not declared your two buses to Sasria**, a R1,738,186 gap. And on the buses, **fare-paying passenger liability is declined by both insurers**, which is right if they carry your staff and wrong if they do not.

✓ WHAT THIS REVIEW HAS ALREADY ESTABLISHED

Both documents reconcile to the cent. They cover the same 70 vehicles and the same six premises. **Alpha is R38,546.92 a month cheaper and is the stronger document on excess structure and on disclosure.** It is also the one carrying no pollution cover, which on this fleet is the cover that matters most, and that is a gap an underwriter can close with an endorsement rather than a re-quote.

We are not asking you to choose between them yet. We are asking for your current schedule and for three prices, and then there will be one number and one recommendation.
