

BAKERS TANKERS · INTERNAL · 15 SEPTEMBER 2026 · MEETING THURSDAY 17TH

# Bakers Playbook

For Bronwan Fouche. Do not walk in with a saving. The motor insurer excludes hazardous materials and the client hauls jet fuel. The two motor documents cover fleets six times apart. There is one clean saving, on goods in transit, and it needs two fixes.

LEAD WITH

**Hazmat  
exclusion**

on their own schedule

DO NOT COMPARE

**30 vs 183**

different fleets

REAL SAVING

**R29,454**

a year, goods in transit

# Their motor policy excludes hazardous materials. They haul jet fuel.

## OUTSurance OT89649119, FLEET SPECIAL CONDITIONS

"OUTsureance does not provide cover in the following instances: ... **\* when the vehicle transports hazardous materials**"

Business description on the same schedule: **"Service & repair, Transport, goods"**. Nothing about tankers, fuel or dangerous goods.

## AND THE GOODS IN TRANSIT SUBMISSION, 14 SEPTEMBER

"General Goods, **Diesel, Petrol, Illuminated Paraffin, Jet Fuel**, FMCG, Scrap Metal and Scrap Batteries."

Two documents, same client, same broker file, six weeks apart. One says the vehicles carry fuel. The other says vehicles carrying hazardous materials are not covered.

## WHY IT IS NOT JUST SLOPPY DRAFTING

The same OUTsureance schedule sells **environmental impairment liability R5,000,000 per vehicle at R91.09** and records **"Type of substance: Liquid. Containers used: Yes."** The insurer has underwritten and priced a liquid pollution exposure on vehicles its own fleet conditions exclude. You are not speculating, you are pointing at an internal contradiction on one document.

## SAY IT LIKE THIS, AND NO STRONGER

*"Before we talk about price I want to put one thing in front of you, because I would rather raise it and be wrong than stay quiet and be right. Your fleet schedule says OUTsureance does not cover a vehicle transporting hazardous materials. Your goods in transit submission says you carry diesel, petrol, paraffin and jet fuel. I have gone back to OUTsureance in writing. I am not asking you to do anything today, I am asking you not to decide anything until we have their answer."*

## PRECEDENT, FOR YOU

**Twin Trans.** King Price came in cheaper on a fuel tanker and had dropped pollution liability and halved third party. We benched it. On a tanker fleet the decisive cover is never the headline premium, it is what pays when the load ends up on the road.

# OUTsurance covers 30 vehicles. Alpha quoted 183.

R138,104.10 against R75,457.10 looks like Alpha is 83% more expensive. It is not a comparison at all. Both documents reconcile, they just describe different fleets.

| ALPHA, BY CLASS       | UNITS | SUM INSURED | PREMIUM    | SASRIA     |
|-----------------------|-------|-------------|------------|------------|
| Heavy commercial      | 29    | R24,147,118 | R64,392.31 | R9,582.06  |
| Trailers over 3,500kg | 119   | R27,206,482 | R22,663.00 | R10,796.08 |
| Private type          | 19    | R5,338,232  | R7,842.75  | R49.78     |
| Light commercial      | 16    | R2,029,000  | R3,504.76  | R143.29    |

Summary: general R190.00 + motor R98,402.83 + liability R5,800.00 + extensions R1,450.00 + VAPS R1,372.50 + Sasria R14,334.61 + towing R16,554.16 = R138,104.10. Reconciles.

## THE HONEST LIKE-FOR-LIKE, AND IT FAVOURS ALPHA

**OUTsurance: 26 trucks, R62,854.24, so R2,417.47 each.**

**Alpha: 29 trucks, R64,392.31, so R2,220.42 each.**

**Alpha is R197.05 per truck cheaper, about 8.2%, on three more trucks.**

The whole R62,647 difference between the two documents is the **115 extra trailers, 16 light commercials and 19 private cars** that OUTsurance does not cover.

## THE QUESTION YOU HAVE TO ASK BEFORE THURSDAY

**What insures the other 153 vehicles?** Either there is a second motor policy nobody has sent us, or a large part of this fleet is uninsured. **Do not present any motor comparison until you know.** If it is uninsured, that is a bigger conversation than the premium, and it is the conversation that wins the account.

## EXCESS, WHICH CUTS THE OTHER WAY

**OUTsurance: flat R50,000** basic on the heavy units, third party R6,980, glass R2,000, accessories nil. **Alpha: 10% of claim minimum R30,000** on heavy commercial and trailers over 3,500kg, 5% minimum R5,000 on light and private. Alpha's minimum is lower, but it is a percentage: **on a R1.5m truck, 10% is R150,000 against OUTsurance's flat R50,000.** On any serious loss OUTsurance is materially better. Say so.

# Alpha's clean-up cover is one fifth, and it is on the wrong section

|            | THIRD PARTY              | POLLUTION AND CLEAN-UP                                                |
|------------|--------------------------|-----------------------------------------------------------------------|
| OUTSURANCE | SUB-SECTION B R5,000,000 | EIL R5,000,000 PER VEHICLE, R91.09/MO, CLAIMS-MADE, RETRO 30 JUN 2026 |
| Alpha      | Sub-section B R5,000,000 | Clean-up costs (leakage from vehicle) R1,000,000, 0.240% = R5,800.00  |

THE PART NOBODY WOULD NOTICE OFF A SUMMARY

Alpha's clean-up line appears **only in the HEAVY COMMERCIAL liability table**. The liability tables for **trailers over 3,500kg**, light commercials and private types each show sub-section B at R5,000,000 and **no clean-up line at all**.

**On a tanker fleet the product is in the trailer.** A spill from a tanker trailer may sit outside an extension written against the truck. This is the same method point as the Wes-Kaap and Gateway passenger liability finds: **read it per item, not per summary**.

AND A DISCLOSURE THAT CUTS AGAINST THE INCUMBENT TOO

OUTsurance's EIL is **claims-made with a retroactive date of 30 June 2026**, about six weeks of tail. Anything before that is uninsured for pollution on either document. Mention it; it is the kind of thing that builds trust and it costs you nothing because the alternative is worse.

THE ANSWER, AND IT IS AN ACTION FOR YOU TODAY

**Envirosure Underwriting Managers FSP 38594, underwritten by Centriq, product "The Transport Clean-Up". Indemnity R1m to R30m, and an Excess Solution that takes the excess to NIL inside RSA** (R50,000 cross border, and a separate cross-border version so both can go to nil). Plus spillage from own fuel tank R100,000 or R200,000, spillage while loading and off-loading R250,000 or R500,000, consignor cover, riot spillage, dry non-hazardous.

**What Anne was sent is a BLANK PROPOSAL FORM with no client details on it.** It is not a quote. **Fill it in and submit it today**, or Thursday happens without a clean-up number. Same referral route Petrosure gave us on Integral Trading.

# Goods in transit saves R29,454 a year, subject to two fixes

|                                                                                                       | BASIS                                                               | MONTHLY                     |
|-------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------|-----------------------------|
| CURRENT SANTAM SPECIALIST MARINE<br>AMDBLE265448M, DURBAN, BROKER STERLING<br>HAMILTON WRIGHT 4349453 | R50,000,000 AT 1.00% = R500,000/YR<br>INCL VAT AND STRIKES AT 0.05% | R41,666.67                  |
| Nautical Underwriting Managers FSP 43437,<br>JP Liebenberg, 20% commission                            | R50,000,000 at 0.90% = R450,000/yr +<br>Sasria R1,712.15            |                             |
| Saving                                                                                                |                                                                     | -R2,454.52/mo<br>R29,454/yr |

Any one conveyance R1,620,000 and driver fidelity R1,620,000 on both, to the rand. General excess 10% min R10,000 and hijack 25% min R25,000 on both. Debris removal R25,000 goes to R30,000. **Territory goes from four to twelve.**

## FIX 1: IT NAMES ONE ENTITY INSTEAD OF THREE

Santam insures "**Bakers Tankers, Bakers Bulk & MG Carriers FTTR&I**". The new quote names **Bakers Tankers** alone. Moving as quoted leaves two entities without goods in transit cover. **Same shape as the seven named insureds on Integral Trading.** Get all three on the schedule before anything is bound.

## FIX 2: AN ADDITIONAL EXCESS THAT BITES ON THE SCRAP LOADS

On top of the normal deductibles, **High Risk Cargo over R1,000,000 attracts a further 25% of claim, minimum R25,000, unless armed escort.** Their own example: a R1,500,000 hijacked load carries **R525,000 of total excess.**

**High Risk Cargo is defined to include "Precious Metals including Copper, Cobalt, Ferro Chrome etc." and "Solar Panels / Batteries / Inverters / Generators."** The declared subject matter includes **Scrap Metal and Scrap Batteries.** Fuel is NOT on the list. So the clause bites on the scrap work and not on the tanker work. **Get that confirmed in writing.** R29,454 of annual saving against R375,000 of extra excess on one load is a bad trade if the scrap volume is material.

## AND ASK THE CLIENT THE TERRITORY QUESTION

Twelve territories against four is a real gain **if they use it.** On Integral Trading the wide cargo territory turned out to be unused, diesel and RSA only, and was worth nothing. Ask before you sell it.

## LOOSE ENDS ON THE GIT QUOTE

Period reads "**12 months commencing on TBA and ending on TBA**", postal address TBA, and loss history reads "**No previous claims in the last 3 years**" against a motor record showing eight incidents in 2022 alone. Different classes, but tell the underwriter or the price is not firm.

# The OUTbonus, 148 units, and the admin

## RAISE THE OUTBONUS YOURSELF, BEFORE THEY DO

The OUTsurance schedule projects a **Business OUTbonus of R307,010.54 payable 07 August 2028** on the current claims ratio, and confirms "the new Business OUTbonus is applicable on this Fleet policy". **Moving the motor forfeits it.**

**This is the CS Continental lesson.** There we found a R42,637.61 bonus worth 57 years of the saving and it stopped us moving the commercial policy. Here the bonus is seven times larger. It is claims-ratio dependent, and nothing is paid above 30%, so it is not guaranteed. **But you raise it, not them.** Being the broker who volunteers the argument against your own sale is what gets you the whole account.

## 148-UNIT LEAD, AND IT IS A CONDITION OF COVER

The new GIT terms make theft cover on **any load over R500,000 conditional on live satellite tracking, operational at the time of claim**, or a convoy of at least three vehicles. A full fuel load is comfortably over R500,000, so in practice that is every trip.

**29 trucks plus 119 trailers = 148 units.** The trailers need their own units because the cargo and the theft exposure travel with the trailer. OUTsurance's depot record lists security as **"Access control, 24 hours, Unspecified"** and **"Alarm with armed response, radio link, Unspecified"**, and says nothing about vehicle tracking at all.

**43 dated fleet incidents over 10 years** also makes the driver-scoring and camera case.

## THE CLAIMS RECORD, AND THE GATE IT CREATES

**43 incidents over 10 years, R1,588,000 disclosed** across the 22 entries carrying a value. Worst single loss **R663,192 on 23 July 2022**. By year: 2017 one, 2018 seven, 2019 six, 2020 ten, 2021 eleven, 2022 eight. Mostly accidental damage.

**Nothing on the Alpha quote says it was rated on that record.** Get it in writing before R138,104.10 is treated as firm. Same gate as CS Continental and Idol Transport.

## ADMIN TO CLEAR

Address is **15 Nereeniging Road, Alberton 1449** on Santam and **15 Vereeniging Road, Alberton 1451** on OUTsurance and the GIT quote. OUTsurance depot allows a **maximum of 27 vehicles against 30 scheduled**. Alpha's Sasria **does not add up**: the four section figures total R20,571.21 against a summary of R14,334.61, a difference of R6,236.60, and only the summary figure reconciles to the total. OUTsurance broker of record is **Virgil Niekerk, an in-house OUTsurance broker**, the same arrangement as Lara Gray on CS Continental.
